Low-power N-type acousto-optic driver

Product Overview:	<p>Product overview: acousto-optic driver is a RF driver that provides supporting functions for acousto-optic device products. It is applicable to acousto-optic modulator and frequency shifter products with driving power less than 3W. The RF signal generated by the driver is used to generate ultrasonic waves in the crystal of the acousto-optic device. The frequency and intensity of the RF signal applied will determine the degree to which the beam is modulated, deflected or tuned. The drive has good heat dissipation, and the use of matched drive will bring better temperature stability.</p>
